

Transport Request Management – Workflow & Automation Documentation

Application Overview

The application name is Transport Request Management. It is designed to manage the complete transportation lifecycle including:

- Transport Request Creation
- Dispatch Management
- Driver & Truck Assignment
- Supplier Assignment
- Waybill Generation
- Waybill PDF Creation
- Delivery Tracking

The system contains the following major forms:

1. Dispatch Form
 2. Transport Request Form
 3. Truck Master Form
 4. Driver Form
 5. Supplier Form
 6. Waybill
 7. Waybill PDF
 8. Items
-

Main Business Flow

Step 1 – Create Transport Request

The user creates a transport request from the Transport Request Form.

The request contains:

- Client information
- Pickup location
- Delivery location
- Shipment type
- Truck type
- Quantity
- Pickup date
- Request ID (auto-generated)

Default status is managed from the request lifecycle.

Step 2 – Create Dispatch

The dispatch team creates a dispatch entry from the Dispatch Form.

During dispatch:

- A transport request is selected.
- Assignment type is selected.
- Driver and truck are assigned.
- Supplier details are assigned if outsourced.
- Dispatch status is updated.

After successful dispatch creation:

- Transport Request status automatically changes to Assigned.
-

Step 3 – Dispatch Status Update

When dispatch status becomes Dispatched:

- A Waybill is automatically generated.
 - A unique Waybill number is created.
 - Truck and shipment details are copied into the Waybill form.
-

Step 4 – Waybill Approval

When the Waybill status becomes Approved:

- A professional PDF is automatically generated.
 - The PDF is stored in the Waybill PDF form.
-

Step 5 – Delivery Completion

When dispatch status changes to Delivered:

- The system checks whether POD (Proof of Delivery) is uploaded.
 - If POD exists, the related Transport Request status becomes Delivered.
-

Detailed Workflow Documentation

1. Workflow: Hide Workflow

Workflow Name -

hide workflow

Form -

Dispatch_Form

Trigger Event -

On Add

Purpose

This workflow dynamically shows fields based on Assignment Type and Truck selection.

Conditions & Actions

Condition 1

Assignment_Type == "Own Fleet"

Action

Show the following fields:

- Driver
- Truck_Number

Business Logic

If transportation is handled using the company's own fleet, then the driver and truck fields become visible.

Condition 2

Assignment_Type == "Outsourced Supplier"

Action

Show the following fields:

- Supplier_Name
- Supplier_Truck

Business Logic

If transportation is outsourced, supplier-related fields become visible.

Condition 3

Truck_Number is not null

Action

Show:

- Truck_type
- Shipment_Type

Business Logic

Once a truck is selected, the related truck and shipment details become visible.

2. Workflow: Dispatch Request

Workflow Name

Dispatch request

Form

Dispatch_Form

Trigger Event

On Add

Purpose

Automatically updates the linked transport request status after dispatch creation.

Logic

```
Transport_req = Transport_Request_Form[ID == input.Transport_Request];  
Transport_req.Status = "Assigned";
```

Result

When a dispatch is created:

- Related transport request status becomes Assigned.

Business Benefit

Helps the operations team track which requests have already been assigned.

3. Workflow: Create Waybill

Workflow Name

create waybill

Form

Dispatch_Form

Trigger Event

On Add or Edit

Condition

Status == "Dispatched"

Purpose

Automatically generates a waybill once dispatch is marked as dispatched.

Main Logic

The workflow:

1. Fetches transport request details.
2. Generates a unique waybill number.
3. Retrieves truck information.
4. Retrieves customer details.
5. Creates a new record in the Waybill form.

Waybill Number Format

WB-YYYYMMDD-RequestID

Example:

WB-20260520-TR001

Data Copied to Waybill

The following fields are transferred:

- Client Name
- Delivery Address
- Pickup Location
- Pickup Date
- Truck Number
- Waybill Number
- Truck Type

Business Benefit

Reduces manual work and ensures standardized waybill generation.

4. Workflow: Create Waybill PDF

Workflow Name

Create waybill Pdf

Form

Waybill

Trigger Event

On Add or Edit

Condition

Status == "Approved"

Purpose

Automatically generates a PDF version of the approved waybill.

Main Process

The workflow:

1. Creates HTML content dynamically.
2. Converts HTML into PDF.
3. Assigns a file name.
4. Stores the PDF inside the Waybill_PDF form.

Generated PDF Contains

Section 1 – E-Way Bill Details

- Waybill Number
- Generated Date
- Status
- Truck Number
- Pickup Date
- Shipment Type
- Truck Type
- Quantity

Section 2 – Address Details

FROM:

- Client Name
- Pickup Location

TO:

- Delivery Location

Section 3 – Goods Details

- Item Name
- Item Description
- Quantity

- Unit Price

Section 4 – Transportation Details

- Transporter Name
 - Transport Mode
-

PDF File Naming

Waybill_<Waybill_No>.pdf

Example:

Waybill_WB-20260520-TR001.pdf

Business Benefit

Creates professional transport documentation automatically.

5. Workflow: Show Transport

Workflow Name

Show transport

Form

Dispatch_Form

Trigger Event

On Add or Edit → On Load

Purpose

Automatically fetches truck type when the form loads.

Logic

```
Dispatch = Dispatch_Form[ID == ID];  
truck = Dispatch.Truck_Number.ID;  
truckdetail = Truck_Master_Form[ID == truck];
```

```
if(truck != null)  
{  
    input.Truck_type = truckdetail.Truck_Type;  
    Dispatch.Truck_type = input.Truck_type;
```

}

Functionality

- Retrieves selected truck.
- Fetches truck type from Truck Master.
- Updates Truck Type field automatically.

Business Benefit

Prevents manual truck type entry and reduces errors.

6. Workflow: Show Truck

Workflow Name

show truck

Form

Dispatch_Form

Trigger Event

On User Input of Assignment_Type

Purpose

Reserved for future assignment-type-based logic.

Current Status

Currently no actions are configured in this workflow.

7. Workflow: Update Transport Request

Workflow Name

update transport request

Form

Dispatch_Form

Trigger Event

On Edit → On Update of Status

Condition

Status == "Delivered"

Additional Validation

if(POD_Upload != null)

Purpose

Updates transport request status after successful delivery confirmation.

Logic

```
Transport_req = Transport_Request_Form[ID == input.Transport_Request];  
Transport_req.Status = "Delivered";
```

Business Rule

Transport request is marked as delivered only when:

1. Dispatch status = Delivered
2. POD document is uploaded

Business Benefit

Ensures delivery completion is verified with proof.

Status Flow

Transport Request Status Flow

New Request

Assigned

Dispatched

Delivered

Important Conditions Used in System

Condition	Purpose
Assignment_Type == "Own Fleet"	Show internal fleet fields
Assignment_Type == "Outsourced Supplier"	Show supplier fields
Truck_Number is not null	Show truck details
Status == "Dispatched"	Create waybill
Status == "Approved"	Generate PDF
Status == "Delivered"	Complete delivery process
POD_Upload != null	Validate proof of delivery

Overall System Working

The system follows this complete lifecycle:

1. Customer transport request is created.
2. Dispatch team assigns truck/driver/supplier.
3. Request status changes automatically.
4. Dispatch is marked as dispatched.
5. Waybill is generated automatically.
6. Waybill approval generates PDF.
7. Delivery is completed with POD upload.
8. Final request status becomes delivered.

This automation minimizes manual work, improves operational tracking, and ensures proper transportation documentation management.
